## **QUESTION-2:**

### **CI-CD PIPELINE:**

- It means continuous integration and continuous deployment.
- It is a method to frequently deliver apps to customers by introducing automation into the stages of continuous delivery, and continuous deployment
- Continuous deployment is a strategy in software development where code changes to an application are released automatically into the production environment.
- Continuous integration is the practice of automating the integration of code changes from multiple contributors into a single software project.

## **PROCESS OF CI-CD PIPELINE:**

- 1.Code
- 2.Fetch
- 3.Build
- 4.Test
- 5.Notify
- 6.Feedback

- Code--->Merge--->Build--->Test Automatically deploy to production.

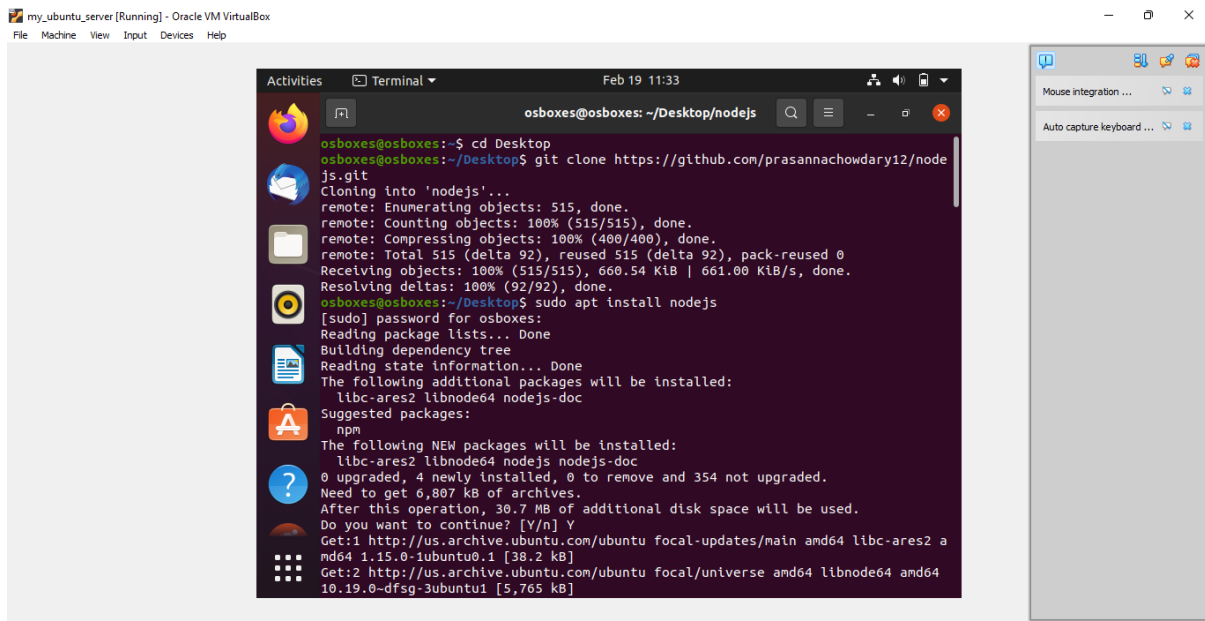

## **JENKINS:**

- It is an opensource automation server.
  - Building
  - Testing
  - Deploying
- It is used to implement CI-CD workflows, called pipelines.
- Jenkins is used to build and test the software projects continuously making it easier for developers to integrate changes to the project, and making it easier for users to obtain a fresh build.

- It also allows you to continuously deliver your software by integrating with a large number of testing and deployment technologies.

## **ADVANTAGES:**

- 1.It is easy to install.
- 2.It is free of cost
- 3.It is an opensource tool with a great community support.

The screenshot shows a terminal window titled "osboxes@osboxes: ~/Desktop/nodejs" with a date and time of "Feb 19 11:33". The terminal displays the following commands and output:
